Water finding paste

Art.no.: 0543050

Water Finding Paste is a specialised tank gauging paste designed to quickly detect water in fuel and oil storage tanks. The paste changes colour instantly from milky white to red when it comes into contact with water, providing a clear indication of water levels.

Water Finding Paste is used with gauging tapes and dipsticks to identify water accumulation at the bottom of fuel, oil and storage tanks. Suitable for diesel, gasoline, kerosene and petroleum products, it offers a fast and reliable method of determining water presence and depth.

Water contamination can cause corrosion, fuel degradation, equipment damage and operational issues. Regular use of Water Finding Paste helps identify water build-up before it leads to costly maintenance or system failures.

The product is widely used throughout the marine, offshore, industrial, transport and fuel storage sectors where accurate tank inspection is essential.

Features

- Instant colour change upon contact with water
- Changes from milky white to red
- Suitable for diesel, gasoline, kerosene and oil
- Easy application to gauging tapes and dipsticks
- Fast and accurate water level indication
- Ideal for marine, industrial and storage tanks

Typical Applications

- Marine diesel fuel tanks
- Fuel storage facilities
- Industrial generator systems
- Transport and logistics operations
- Offshore installations and process industries

Volume	75 g
Weight	0.09 kg
HS code	38249009
COO	USA
Sales unit:	PCS
Master packaging (pcs)	10
