

# Steel wire rope ferrule, aluminum – TALURIT T

The T aluminum turnback ferrule system is easy and reliable to use. It is quick, safe, and has proved itself to be totally reliable. It is far more efficient than all other swaging methods on the market.

The Talurit® T-ferrule is the original in mechanical splicing and has laid the grounds for the European standard. Nowadays, the T-ferrule corresponds to the European standard (FSET) for turnback ferrule or ferrule-secured eye termination. The ferrule is according to EN 13411-3 standard and is produced from seamfree extrusions which are extruded seamlessly over a mandrel and the aluminium alloy is AW-5051A according to EN 573-3.

The T-ferrule is for usage on wire ropes with a maximum tensile grade up to 1960 while the TS (shorter version) is for tensile grade up to 1770. For applications above 2160, T-LOC™ must be used together with the T-ferrule

To find the right ferrule size, check our catalogue page

Material	Aluminum
Produced in accordance with	NS EN 13411-3
Model	T
Brand	Talurit®
