

Sundström SR510 P3 R, 5 pcs

Art.no.: 1218375

Mechanical particulate filter with exceptionally low breathing resistance for protection against all types of particles. Particulate filter for Sundström SR 100 half-mask and SR 200 full-face mask.

The SR 510, P3 R* particulate filter is designed for use in Sundström half-masks, full-face masks, and SR 500/SR 500 EX/SR 700 fans. The filter provides protection against all types of particulate contamination. The particulate filters can easily be combined with gas filters from the Sundström filter range to also provide protection against gases and vapors, such as during spray painting.

The particulate filter should be combined with the SR 221 pre-filter, which extends the lifespan of the particulate filter. The SR 500/SR 500 EX should always be used with two particulate filters, two combined filters, or a combination of two gas filters of the same type and particulate filters.

*R (Reusable): The filter is intended for multiple uses.

Material	PP
Min. temp.	-10°C
Max. temp.	+55°C
Model	SR 510
Brand	Sundström
HS code	63079090
COO	SWE
Sales unit:	PCK
Master packaging (pcs)	5
Package count (pcs)	5
