Safety helmet - 3M™ G3000

The 3M™ G3000 safety helmet is designed for demanding industrial environments where protection, comfort and visibility are essential. Featuring advanced ventilation, a wide field of vision and the innovative Uvicator™ UV indicator, it delivers reliable head protection throughout the workday.

The 3M™ G3000 safety helmet was developed in close cooperation with forestry and industrial workers to provide effective protection in harsh working environments. Its smooth, rounded design helps prevent snagging on cables, wires and branches.

The ventilated shell ensures excellent airflow for improved wearer comfort, while the short brim enhances upward visibility. For work in confined spaces, the head harness can be rotated 180° to improve the field of view.

A built-in 3M™ Uvicator™ indicator changes color to show when the helmet has reached its UV exposure limit and should be replaced. The helmet is approved for use in temperatures down to -30°C and complies with EN 397:2012+A1:2012. Electrical insulation versions are also available, meeting EN 50365 requirements for low-voltage installations.

Produced in accordance with	EN 397:2012+A1:2012
Brand	3M
