

Torque multiplier – Norbar

The 'Highwayman' torque multiplier has been designed for general purpose use where it is necessary to provide higher torque than would otherwise be possible, due to limitations on space or operator strength. Input to the multiplier is via a ratchet torque wrench (not supplied) set to one fifth of the desired output. This 5:1 torque multiplication is accurate to more than $\pm 4\%$. Supplied in kit form that includes a multiplier head, cranked reaction bar, straight reaction bar, and carrying case. . Robust construction ensures long life with minimal maintenance.

Features and Benefits

- The 5:1 gear ratio of this torque multiplier allows for the amplification of torque applied at the input end, providing significant torque output for tightening or loosening fasteners.
- With wide torque ranges the multipliers are suitable for a broad spectrum of applications, from light-duty to heavy-duty tasks.
- The input drive makes the product compatible with a wide range of sockets and accessories.
- Designed for accuracy and durability, this torque multiplier is built to withstand heavy use in demanding industrial settings.

Typical Applications

- Automotive and Heavy Equipment Maintenance
- Construction
- Mining and Oil & Gas Industry
- Manufacturing
- Agriculture
- Marine
- Industrial Maintenance
- Construction and Infrastructure
