

Lashing D-ring with bracket

Heavyduty lashing points with Dring and bracket, designed for secure cargo securing in demanding environments. The LP series offers multiple load capacities and designs for industrial, transport and offshore use.

The LP series lashing Drings with bracket are engineered for professional cargo securing where strength, reliability and flexibility are essential. Each product consists of a robust Dring manufactured from forged or highstrength steel, combined with a solid steel bracket designed for secure attachment to vehicles, structures or decks.

Depending on the variant, Drings are produced from materials such as EN18 or 40Cr, with brackets manufactured from steels including ST32, Q355D or Q355B. Surface finishes include black phosphated or selfcoloured/lightly oiled options, suitable for harsh industrial and maritime environments.

The LP series covers a wide range of load classes – from mediumduty securing to extreme heavyload applications. This makes the range suitable for transport, industrial installations, offshore operations and specialized securing tasks. Loose weldon brackets are available separately for selected variants, offering additional installation flexibility.

Material	Forged steel
