Mooring buoy - Polyform CCE

The Polyform CC is a soft, inflatable PVC mooring buoy with a short mooring rod, factoryassembled and ready for use after proper inflation. Lightweight, easy to handle and designed for excellent buoyancy and long service life.

The Polyform® CC is a durable, userfriendly mooring buoy constructed from soft, inflatable PVC that provides high buoyancy and easy handling. All CC buoys are delivered fully assembled and only require proper inflation before use.

The short mooring rod features a swivel at the lower end, and all metal components are hotdip galvanized for maximum corrosion resistance. The upper part of the rod and the top grip ring are coated in dark blue plastic for improved handling and protection.

The PVC construction provides low weight, high buoyancy and resistance to UV radiation, saltwater, detergents and common solvents.

Important notes:

- Only the underwater swivel ring is intended for mooring.
- The top grip ring is for handling only.
- All mooring equipment should be inspected for wear at least twice per year.

Benefits:

- Factoryassembled
- Lightweight and easy to handle
- High buoyancy
- UV, saltwater and chemical resistant
- Hotdip galvanized components
- Safe and durable construction

Material	PVC
