

Fire hose coupling, male

NOR type firefighting coupling with male thread in brass, designed for reliable connection of hoses and pipes for water transport applications.

The NOR coupling with male thread is intended for connecting pipes, hoses, spray nozzles, and similar equipment used in water transport. Typical applications include firefighting and water flushing.

The coupling is based on the claw principle and is connected using two identical coupling parts. NOR couplings are available in three different locking sizes, referred to as lock 1, lock 2, and lock 3. On the opposite side of the claw, the coupling features a male thread connection for attachment to pipes or other threaded components.

The product is manufactured in brass, providing durability and suitability for water-based systems.

Lock sizes:

- Lock 1: internal claw distance 83 mm
- Lock 2: internal claw distance 65 mm
- Lock 3: internal claw distance 50 mm

Material	Brass
