

Anti-Seize Compound - Copaslip

The COPASLIP range of anti-seize compounds from MolySLIP is specially formulated to protect fasteners from seizure brought on by both extreme temperatures and corrosion. Infused with pure copper particles, corrosion inhibitors and anti-oxidants, its semi-synthetic fluid helps provide components with excellent protection.

Reducing wear and torque in areas of high friction it helps prevent galling and pitting ensuring easy dismantling and re-assembly of metal fittings, even after prolonged exposure to extremes of environment and temperature.

Features and Benefits

- High and low temperature assembly compound
- Protects against seizure, fusion and corrosion in extreme conditions
- Reduces wear and torque in areas of high friction
- Prevents galling and pitting
- Use to ensure easy dismantling and re-assembly of metal fittings
- Protection from sub-zero temperatures to over 1100°C

Typical Applications

- Metal fasteners
- Assembly
- Construction

Color	Yellow, Gold
Brand	MolySLIP
