

Cable ties, AISI 316

This range of stainless steel cable ties are manufactured from high quality marine grade 316 stainless steel, and comply with BS7671 for the safe installation of wiring systems, especially in and around safety routes.

These ties are commonly used for applications that require a higher strength, higher temperature range and resistance to weathering, aging, fire or chemicals.

Stainless steel cable ties are used across a range of applications from production line facilities, aircraft, power plants, mines, commercial kitchens, tunnels and oil and gas platforms – all of which present harsher operating environments.

Technical Information

- **Minimum Loop Tensile Strength 4.6mm wide:** 89kg
- **Minimum Loop Tensile Strength 7.9mm wide:** 160kg

Material	AISI 316
