

# Chain wheel – FRAM type K

nøstet &

Chain wheel designed for FRAM grade 8 calibrated shortlink chain. Supplied as standard in ductile iron for high durability and reliable operation.

The FRAM Type K chain wheel is a robust, precisionmachined cable wheel engineered for use with FRAM grade 8 calibrated shortlink chain. Its precise chain profile ensures smooth operation, reduced wear, and dependable performance in industrial and marine applications.

The chain wheel is supplied as standard in ductile iron, providing an ideal balance of tensile strength, impact resistance, and long service life. This makes it wellsuited for demanding environments where accurate and reliable chain engagement is essential.

FRAM Type K is an excellent choice for winches, hoists, lifting equipment, and machinery requiring consistent chain control and high operational reliability.
