

# D-ring, Flush LP-84

Flushmounted D-ring designed for safe cargo securing where low profile and high load capacity are essential. Robust construction and hotdip galvanized finish make it ideal for demanding transport, offshore and industrial environments.

The Flush DRing LP84 is a heavyduty recessed lashing point designed to be installed flush with the surface. The lowprofile design reduces the risk of damage to cargo and personnel while providing a clean and functional deck or loading area.

Manufactured from highstrength steel components and finished with hotdip galvanizing, the LP84 offers excellent corrosion resistance and long service life. It is intended for professional applications requiring high capacity and maximum reliability.

Each unit is clearly marked with ILS and product code, as well as a batch number including production month and year for full traceability.
