

Drain plug – BETRO-LOCK Standard

The standard sealing plug is the core of the Betro Lock series, equipped with a T-wrench in acid-proof steel and a 3/8R internal thread for connecting a pressure gauge to monitor back pressure (sizes 1–6)

Versatile in use, it can introduce gas or liquid media inside the plug, functioning as an expanding drain plug. The top disk, larger than the rubber sleeve, protects against impact at pipe ends — ideal for marine deck drains, scupper plugs, and drain lock applications.

Could be used as:

- Sealing plug
- Drain lock
- Scupper plug
- Drain cover
- Expanding drain plug
- Deck drain fitting

Brand	BETRO-LOCK®
