

Drain plug – BETRO–LOCK Inside Sealing Plug

Inside sealing plug designed for secure sealing of holes and recesses in tanks and bulkheads. Commonly used for sealing weep holes along spool edges on ship decks.

The BETROLOCK Inside Sealing Plug is a standard inside plug specifically designed for sealing holes and recesses in tanks and bulkheads. It is commonly used to tighten and seal weep holes along the spool edge on ship decks, where reliable sealing is essential in demanding marine environments.

The plug is manufactured with neoprene cellular rubber, which is vulcanized to ensure maximum adhesion to the sealing surface. This construction provides a strong and reliable seal, making the plug highly effective for marine sealing applications.

Applications:

- Inside sealing plug
- Sealing of holes and recesses in tanks and bulkheads
- Weep holes along spool edges on ship decks
- Marine sealing solutions
