

Drain plug - BETRO-LOCK Standard Non Sparkling

The Standard Non-Sparkling Plug by Betro Lock is a critical safety solution, expertly designed to seal holes and recesses in industrial environments where ignition from sparks poses a significant risk. Crafted with non-sparking materials, this plug is ideal for areas with flammable substances such as gases, vapors, or combustible dust, ensuring reliable performance in hazardous settings.

Its standard design allows for a versatile fit, making it suitable for use as a sealing plug, drain lock, scupper plug, or drain cover across various structures, including tanks, bulkheads, and ship decks. Built for durability, this expanding drain plug offers a secure, long-lasting seal that prioritizes safety and integrity. The robust construction of this marine drain plug makes it an essential component for operations that demand high safety standards in potentially explosive environments.
