

# Drain plug – BETRO–LOCK Standard Non Sparkling

Standard nonsparking sealing plug designed for safe use in hazardous and industrial environments where ignition from sparks is a critical risk.

The BETROLOCK Standard NonSparkling Plug is a safetycritical sealing solution designed to seal holes and recesses in environments where spark ignition presents a significant hazard. Manufactured using nonsparking materials, it is ideally suited for areas containing flammable gases, vapors or combustible dust.

Its standard design provides versatility, allowing it to be used as a sealing plug, drain lock, scupper plug or drain cover across a wide range of structures, including tanks, bulkheads and ship decks.

As an expanding drain plug, it delivers a secure and durable seal while prioritizing operational safety and structural integrity. The robust construction makes it an essential component for marine and industrial operations requiring high safety standards in potentially explosive environments.

## Applications:

- Sealing plug
- Drain lock
- Scupper plug
- Drain cover
- Expanding drain plug
- Tanks, bulkheads and ship decks
