

Cable lugs, uninsulated, stainless acid-resistant steel

Durable stainless acid-resistant steel cable lugs V4A (316) – designed for harsh conditions. Ideal for chlorinated environments, chemical and food industries, and saltwater applications. Withstands temperatures up to 400 °C.

Uninsulated stainless acid-resistant steel cable lugs V4A (316) are engineered for use in aggressive environments where corrosion resistance and high temperature tolerance are essential. Perfect for chlorinated areas, chemical processes, food industry applications, and saltwater exposure. The V4A material ensures long-lasting performance even under extreme conditions.

Material	AISI316
