

Lifting magnet – Tecnomagnete MaxX

MaxX magnetic lifters are the ideal solution for safe and efficient handling of steel workpieces, whether rough or finished. Compact design, low weight, and lifting capacities from 125 kg to 2000 kg maximize crane performance. Built with high-energy Neodymium magnets, precision-machined monoblock structure, and ergonomic handle for easy magnetization and demagnetization. Suitable for flat and round surfaces.

The MaxX series combines advanced magnetic technology with robust construction to ensure maximum performance and reliability. Magnets are shock-protected, and a unique manufacturing process guarantees consistent magnetic efficiency over time. Nickel coating prevents corrosion, while the integrated safety catch and “Smart Lever” feature ensure safe operation. Laser-engraved performance plates display WLL for different surfaces. Available in multiple models for various needs.

Model	MaxX
Brand	Tecnomagnete
