

Cable grip – Lewis LSG-X

The Lewis LSG-X Snake Grip is a heavy-duty, low-profile cable grip designed for pulling new cables or wire ropes using the existing cable being replaced. Featuring a permanently attached swivel and grease-sealed construction, this grip ensures maximum strength and reliability for demanding applications on oil rigs and drilling platforms.

Part of the Lewis Pulling Grips product line, the LSG-X Snake Grip is commonly used on oil rigs and drilling platforms. It includes a low-profile "Swivel Tube Assembly" that provides a heavy-duty friction swivel, permanently lubricated for extended service life. Unlike standard LSG models, the LSG-X cannot be disassembled in the middle, as both grip sides are permanently connected. The size range and working load are clearly marked on the swivel tube assembly. Ideal for situations where separation of grip elements is unnecessary and a low-profile design is preferred. Always seize the grips' ends by bading and taping.
