

Anti Corrosion – CRC SP 400

CRC SP 400 is a longlasting corrosion inhibitor designed to protect metal surfaces exposed to harsh outdoor conditions. The waxy protective film remains flexible, resists moisture and saltwater, and provides up to 2 years of outdoor protection.

CRC SP 400 forms a durable, waxlike coating that prevents corrosion on metal components stored or used outdoors. The protective film does not become brittle over time, ensuring reliable performance even under heavy exposure to moisture, saltwater and corrosive environments. Suitable for machinery, tools, spare parts and structural metal components requiring extended outdoor protection. Offers up to 2 years of longterm corrosion resistance.
