

Anti Corrosion – CRC SP 350

CRC SP 350 is a longterm corrosion inhibitor that forms a thin, penetrating protective oil film that does not dry. It protects metal components from moisture and corrosive vapors, providing up to 2 years of indoor protection and up to 1 year outdoors when stored covered.

CRC SP 350 is a highly viscous protective oil engineered for longterm preservation of metal parts during storage or transport. The product forms a thin, nondrying film that penetrates seams and complex geometries, covering both smooth surfaces and sharp edges. It displaces moisture, prevents corrosion and offers reliable protection under demanding storage conditions. Ideal for machine parts, tools, spare parts and metal components requiring extended preservation. Protected parts should not be stored outdoors without cover.
